DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because the abstract should be in a single paragraph of a separate sheet of paper. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

*A person shall be entitled to a patent unless --
(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.*

3. Claims 6-19 (pre-amended) are rejected under 35 U.S.C. 102(e) as being anticipated by Edens et al.(U.S. Patent No. 6,611,537 B1).

Regarding claim 6, Edens discloses an optical ring network for use in homes, motor vehicle and other environments (Fig. 1, and col. 13/lines 24-40) comprises an optical data line that defines a ring network (as illustrated in Fig. 1/item 120 for a ring network and/or Fig. 7 for a clearer ring topology, and col. 13/lines 40-55 with optical fiber cable is used, refer to col. 15/lines 52-60), a playback transducer (CD/DVD player or multimedia PC of Fig. 1), at least one data source (satellite received at DSS tuner and FM broadcasting received at FM tuner of Fig. 1) connected to the optical data line, and provides compressed data onto the optical data line (col. 13/lines 55-65 as MPEG2 stream is compressed and delivered to the logical ring network 120);

Art Unit: 2611

and at least one data sink for received the compressed signal and the data sink includes a bit stream decoder for decompressing the compressed data signal and provide to the playback transducer (for playing) (refer to Fig. 1, and col. 14/lines 7-23 for MPEG decoder 151, 161 for decoding the compressed data to display on the television).

As for claims 7 and 8, Edens further discloses wherein the bit stream decoder includes means for decompressing video and audio data (col. 14/lines 7-23 for MPEG2 for audio/sound decoding with AC-3 surround sound decoder and video decoding to view and listen MPEG movies).

As for claim 9, Edens discloses wherein the playback transducer includes at least one loudspeaker (speakers 153, 154, 156, 157, 158 for Fig. 1, col. 14/lines 7-23).

As for claim 10, Edens further discloses wherein the playback transducer includes a video display (LCD display screen is addressed, refer to col. 14/lines 7-23 again).

As for claim 11, Edens further teaches wherein the bit stream decoder includes an MPEG decoder, JPEG decoder and an AC decoder (col. 14/lines 7-23 for MPEG and AC-3 decoders and a JPEG decoder is also suggested to include as computer graphics images can be viewed on the LCD screen).

As for claim 12, Edens further discloses wherein the at least one data source includes a radio tuner (Fig. 1/item 130 for a FM radio tuner).

As for claim 13, Edens further discloses to include a second data source that includes a DVD player that is connected to the logical ring network to provide compressed data onto the optical data line (Fig. 1/item 180 for a DVD is connected to ring network 120).

Art Unit: 2611

As for claim 14, Edens teaches this limitation as DSP 152 is configured to control the selective configuration of decoders MPEG, JPEG and/or AC-3 accordingly (col. 14/lines 7-40).

Regarding claim 15, Edens' reference reads on this claim, refer to claims 6-8, and 12-13 above, not limited to the cited paragraphs above but also to the entire disclosure of Edens' reference.

As for claims 16-19, Edens discloses these features, refer to claims 11-14 as disclosed above.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Rostoker et al and Gerszberg et al (PTO 892 attached) disclose systems related to ring networks and provide MPEG audio/video programs to users.
